

Blue Book

*a diary.
your music.
your story.*

BB BLUE BOOK

Brand Book

Professional Identity Guidelines

Blue Book is a personal music diary where songs become memory anchors: a place to capture what you heard, how it felt, and what was happening around you.

Every song holds a moment.

This guide defines the foundation for a warm, intimate, and modern product identity.

Version 1.1

Prepared for product, design, marketing, and engineering handoff.

What this guide covers

01 Brand Overview

02 Strategy Foundations

03 Audience

04 Voice and Messaging

05 Visual Identity

06 Product Module Gallery

07 Logo System

08 Typography

09 Color System

10 Imagery and UI Language

11 Product Principles

12 Accessibility

13 Implementation Tokens

A music diary, not another feed.

Blue Book helps people capture life moments through music by combining song logging, emotional context, and personal reflection in a warm, intimate environment.

Core Promise

Turn songs into memory anchors.

Positioning

Blue Book is a personal music journal first and a social layer second. It is not a streaming service, a ranking app, or a place to perform taste. It is where listening history becomes emotional history.

Mission, vision, values

Mission

Help people remember who they were through the music they lived with.

Vision

Become the most meaningful memory companion for music lovers worldwide.

Archetype

The Lover, supported by The Sage: intimate, reflective, emotionally precise.

Values

Intimacy over noise

Expression over performance

Memory over metrics

Warmth over perfection

Human stories over algorithmic pressure

Designed for emotionally engaged listeners.

Primary users are digital-native music lovers who already use songs to mark identity, mood, relationships, seasons, and memories. They do not just want to know what they played. They want to remember why it mattered.

Primary Audience

18-34, journaling-friendly, emotionally expressive, often curating identity through music.

User Motivation

I do not want to just track songs. I want to remember what that song meant in my life.

Key emotional jobs

- Capture a moment quickly
- Return to a feeling later
- Make private meaning visible
- Share softly, without pressure

Thoughtful, intimate, never performative.

Blue Book should sound like a thoughtful friend. It should invite reflection without becoming clinical, dramatic, or overly poetic.

Voice principles

- Write simply and emotionally.
- Prefer warmth over cleverness.
- Use prompts, not commands.
- Avoid productivity, ranking, and competition language.

Sample microcopy

What moment do you want to save today?

How did this song make you feel?

Warm analog memory, modern product clarity

The visual world of Blue Book should feel like opening a private notebook at night: cream paper, deep blue surfaces, handwritten annotations, soft cards, and carefully framed music memories.

Warm

Intimate

Nocturnal

Reflective

Slightly imperfect

Editorial

Avoid

- Pure black and pure white dominance
- Neon gradients
- Corporate dashboard aesthetics
- Aggressive glassmorphism
- Heavy shadows

Mi diario

The core personal journal surface: where music becomes a dated, emotional memory timeline.

Role in the product

This module should prioritize fast capture, visible emotional context, and a calm chronological rhythm. The user should feel like they are returning to a private notebook, not managing a database.

Explorar

A discovery surface that feels curated, nocturnal, and personal without becoming a generic streaming homepage.

Role in the product

Explorar introduces songs, artists, and stories through soft recommendation groups. It should support discovery while preserving the reflective tone of Blue Book.

Personas

A social layer for finding people through shared moods, artists, and memory patterns.

Role in the product

Personas should feel low-pressure. The goal is connection through resonance, not follower competition or popularity ranking.

Historias

Editorial stories that give songs, albums, and artists emotional context.

Role in the product

Historias turns music knowledge into narrative discovery. It should feel like reading short cultural notes inside the same private night-world.

Timeline

A long-view memory map that turns listening moments into personal seasons and chapters.

Role in the product

Timeline should make the diary feel cumulative: weeks, months, and years become emotional arcs rather than raw activity stats.

Guardado

A personal library of saved songs, stories, playlists, and meaningful moments.

Role in the product

Guardado is the quiet archive. It should help users return to what mattered without making the space feel cluttered or transactional.

A quiet mark for personal memory.

Secondary monogram

Usage rules

- Use the wordmark on brand surfaces, landing pages, and editorial moments.
- Use the monogram for app icon, favicon, compact navigation, and avatars.
- Maintain clear space equal to the height of the capital B.
- Do not stretch, rotate, outline, or apply arbitrary color changes.

Functional clarity plus handwritten intimacy.

Inter

Primary UI font for navigation, forms, labels, body, and metadata.

Caveat

Expressive font for reflections, handwritten notes, and brand accents.

Recommended scale

Display	56-64 / 700
H1	40-48 / 700
H2	28-32 / 600
Body	16-18 / 400
Caption	12-13 / 400
Reflection	22-28 / 500

Cream paper, deep night, soft emotional tags.

				
Cream Base #F3EEE3	Cream Light #FAF6EC	Night Blue #1A2547	Deep Night #0F1730	Ink Soft #1C1C1A

Recommended ratio

60% light neutrals / 25% dark surfaces / 10% imagery / 5% accents

Make the interface feel kept, not consumed.

Imagery should feel like a memory object: night landscapes, quiet interiors, paper texture, polaroid framing, handwritten annotations, and subtle visual grain.

UI language

- Dark sidebar as a night reading space.
- Cream cards as paper-like memory surfaces.
- Rounded chips for mood and context.
- Inline creation flow, not heavy modals whenever possible.
- Music controls should support the diary, not dominate it.

Design note

The product can be social, but the interface should never feel like a leaderboard. Reflection is the hero.

Principles for every product decision.

Memory-first hierarchy

Reflection and emotional metadata outrank analytics.

Fast capture

A user should be able to save a basic entry in under ten seconds.

Soft contrast

Readable and accessible, but never visually harsh.

Emotional affordance

Emojis, tags, and handwritten text carry meaning, not decoration only.

Delight in restraint

One beautiful detail per section is enough.

Warmth should never reduce usability.

- Meet WCAG AA contrast for all text and controls.
- Use at least 16px body text in product surfaces.
- Never rely on color alone to communicate state.
- Keep focus states visible on all interactive elements.
- Respect reduced motion preferences.
- Use minimum 44x44px touch targets.

Accessibility stance

The handwritten and analog feeling must remain legible. Emotional design is strongest when everyone can use it comfortably.

Design tokens for engineering handoff.

```
:root {  
  --bb-cream-base: #F3EEE3;  
  --bb-cream-light: #FAF6EC;  
  --bb-night-blue: #1A2547;  
  --bb-deep-night: #0F1730;  
  --bb-ink-soft: #1C1C1A;  
  --bb-fog-gray: #B9B7B2;  
  --bb-mood-blue: #C9D9FF;  
  --bb-context-sand: #E9DCC6;  
}
```

Usage ratio:

60% light neutrals / 25% dark surfaces / 10% imagery / 5% accents

Versioning

Update this guide by semantic brand versions: v1.0 for launch identity, v1.1 for token refinements, v2.0 for major visual shifts.
